

# GLOBAL PROJECT MONITORING SYSTEM

A Comprehensive Integrated Global Project Monitoring System (GPMS) is essential, wherein projects being executed across the municipalities in the state can be tracked digitally online. To collect project information using advanced GPMS mobile technologies. The system aims to create a platform for systematic, effective and efficient monitoring of projects to ensure compliance, leveraging the latest in distributed data processing, cloud computing, E-Mail/SMS communication, Geographical Information Systems and the best practices in project management & monitoring.

**GPMS-CRMS** for citizen, complainant, company, correlating, countries, communication and task management monitoring system, for getting inputs for Matrix management system, document management system, for data validation, annotation, indexing and moving this data information on real-time into the GPMS cloud with secured access from anywhere. This enables for organization for communicating directly with the employees for capturing specific project related Information.

**GPMS with REMS** A Project Management Framework for Project monitoring, an end-to-end solution for any Government/Private Corporation to manage their project/s online, to get real time information updates from all their stake holders that also acts as a Multi-Jurisdictional investigations system that helps to track progress of public funded projects from conception to completion. World's best practices on how to get things done are used for processing the information, as it gets validated, collated, analyzed for transforming to actionable intelligence.

**GPMS-E-File Management** for document management, Tagging, Indexing and correlation through digitization from scanned images etc. and moving files online for comments or approvals and for tagging the additional evidences extracted from the unstructured images or documents or videos or audio's etc. that could provide more processed information for action as the information continuously gets collated and analysed and presented to domain experts for their inputs and interventions.

**GPMS-WIKI** a Public page integrated with Face Book for any Government department to display their project status for public to view, send their feedback, comments, complaints or upload the photos, videos, audio's, documents, etc. as it serves as a knowledge management portal through which capacity and skill building interventions for all stakeholders are made possible

**GPMS-Task Management** for accessing from any mobile devices or phones for Project monitoring from site online through Mobile phone to assist task teams supervision and also makes it easier for citizens to hold governments and private actors accountable.

**GPMS- Tally integration** for any Government department to scan and upload their vendor bills online, digitize and post to Tally for generating various Tax compliance reports or mismatch tax wise reports etc. and tax compliance reports

**GPMS-Beneficiary Monitoring System** for online application forms and approvals of central/state/ Govt. employees and this enables a single view or this individual specific all scanned documents including medical reimbursements records, to be uploaded or viewed online.

**GPMS-Project Vigeye** for complaint management system for any Government Project / Citizen participation in the project that enables evidence capture and transmission from site that also empowers citizens to keep an eye on the corruption taking place in their neighbourhood or geographical locations enabled to capture Geo-stamped information on corruption and pass them onto a central server in the cloud and then central processing then takes over after acknowledging and giving a complaint ID to the sender for tracking progress achieved in processing the information and the citizen can keep track of the complaints online

**GPMS- Online Survey System** for any Project feedback for conducting Implementation Impact Analysis Studies integrated with Latitude / Longitude captured automatically, from Hand Held/Mobile Devices to Capture Data from Ground;

**GPMS-Team one World** for global stake holders participation using this advanced Information & Communication Technology in improving Vigilance and Public Works Monitoring with the active involvement of concerned global citizens and to build up an international case-on-line with inputs directly coming from participative countries' vigilance officers & citizens as voluntary or mandatory participation.

Finally this will be the **Central Repository** for Collection, Collation, Analysis and Actionable intelligence for action and feedback for loop Convergence of ideas from GPMS, Cloud computing, crowd sourcing, financial accountability, actionable intelligence, data is converted into information for action. when compliant is converted into actionable intelligence became knowledge as the integrated reports can be generated for comparing original project schedule and result of analysis by searching of metadata across multiple sources.

## The GPMS has two basic features

- a) To collect and transmit information from field in real time to a central server.
- b) Information from field will be collected using hand held devices/ mobile phones.
- c) Information collected can be a photo, video, audio, note or a survey/ inspection form.
- d) Information collected is to be stamped with Geo Coordinates and time.
- e) Information collected will be encrypted and instantly transferred from the device to the centralised server using network connectivity of the device.
- f) Information can be captured and transmitted by Field officers, inspection teams, Volunteers, NGOs etc.

### 1. To analyze field information

- a) The information collected from the field will be analysed for various parameters designed for cost overrun, time overrun and quality checks.
- b) Exception reporting can be auto generated for senior officers to visualize.
- c) To give specific tasks to collect field information

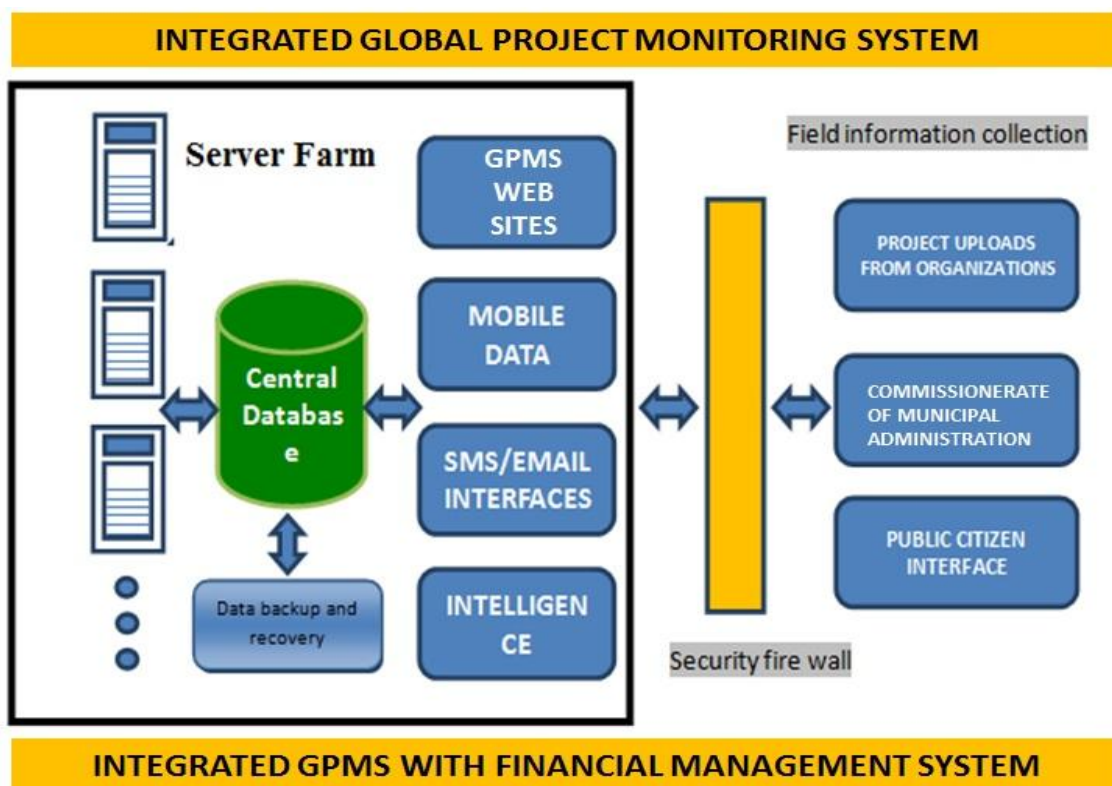

### 2. The other features of GPMS include

- a) **Mobile Task module** in the GPMS provides for a mobile task system, using which the Commissionerate of Municipal Administration can interact with the organization staff, the citizens and stake holders monitoring the project and the CMA office to gather first-hand information through mobile phones and directly upload the same into Integrated GPMS.
- b) **GIS module in GPMS** where project data can be analysed & viewed in a geographical context. The geo-stamped data coming from the mobile task system, GPMS citizen complaints from GPS-enabled mobiles, geo-stamped data from citizens and stakeholders etc. are mapped into a GIS software such as Google Earth to view & analysis it geographically.
- c) **SMS Communication Module** to facilitate SMS interface in seamlessly integrating into GPMS such that the Municipality engineers, CMS team can send bulk, organisation-level, project-level, team-level or individual-level communication through SMSes.

## GPMS Cloud Computing Infrastructure

The proposed system has to process 1000's of projects on a daily basis, from initial data entry to final intelligence analysis, managing diverse communication channels such as websites, mobile data, Email and SMS, providing a seamless and powerful environment for vigilance data processing, communication, monitoring and management.

Such a system of state level scale requires sophisticated and scalable compute infrastructure. The advancements in cloud computing and data centre infrastructure make it possible to meet such requirements. The following diagram illustrates the GPMS-FMS cloud computing ecosystem,

While CMA may effectively scale up the existing internal IT infrastructure to meet the requirements, it may be easier and cost effective to leverage existing nation-wide infrastructure providers such as PSU's ITI data centers. In this model the CMA can utilize the IT infrastructure for GPMS on rental/lease basis, greatly reducing the cost overhead and day to day management.

## Municipality Organization interface

The Integrated GPMS provides simple, effective website for each municipality organization to upload their project data online. The website is designed such that the web form, through which the project details are to be entered, is designed specifically for that municipality organization engineers or stakeholders or citizens, making it easier for them to enter the data.

### Some of the GPMS-FMS features include:

1. Work Code / Job code / project code with Geo Tag Information along with Lat long Integration
2. Flexible to add forms / including survey forms. For specific department Requirements with database ( Legacy / current online data ) .
3. Metrics Management system,
4. Stake holder management
5. Financial Management ( integration with financial package ) for trail balance and balance sheet generation with integration of P codes , R codes , Budget heads with provision of Bank reconciliation and integration of payment gateway
6. Complaint management system, online help desk, system to escalate to different levels of hierarchy.
7. Real time monitoring system to upload photographs, videos, audio with geo stamp information to the respective project.
8. Task Management – Online ( Web ) or Mobile devices
9. Scan and Data Entry for digitisation of unstructured to structured data.
10. Beneficiary monitoring system integration for tracking programs and schemes
11. System should bring out tax compliance reports , MIS specific to municipalities reports in real time.
12. System is be able to bring reports based on physical progress versus financial progress
13. System integrated with social media for public participation in governance ( Ex Face Book )
14. Web Analytics to track visitor's traffic on related municipality public page.
15. Flexible User management to provide “ n “ users online with audit trail capture.
16. Customised Source code will be handed over to the respective state CMA
17. Capability to integrate Third party Tools , API per municipality requirements like Digital Signature, Biometrics , OTP, encryption tools, GIS etc.
18. Capability to integrate multiple department databases format.
19. Medical Reimbursement for Employees / stake holders integarted
20. Dynamic real-time display of information online for public viewing / decision making.
21. Stake Holder / Investor relationship monitoring capability ( SHIRMS )
22. Multi Lingual Support enabled
23. All State Municipalities and their respective departments can be integrated into GPMS-FMS
24. System capable of creating central repository for the State CMA.
25. System flexible enough to handle any type of crowd sourcing / domain experts activity.

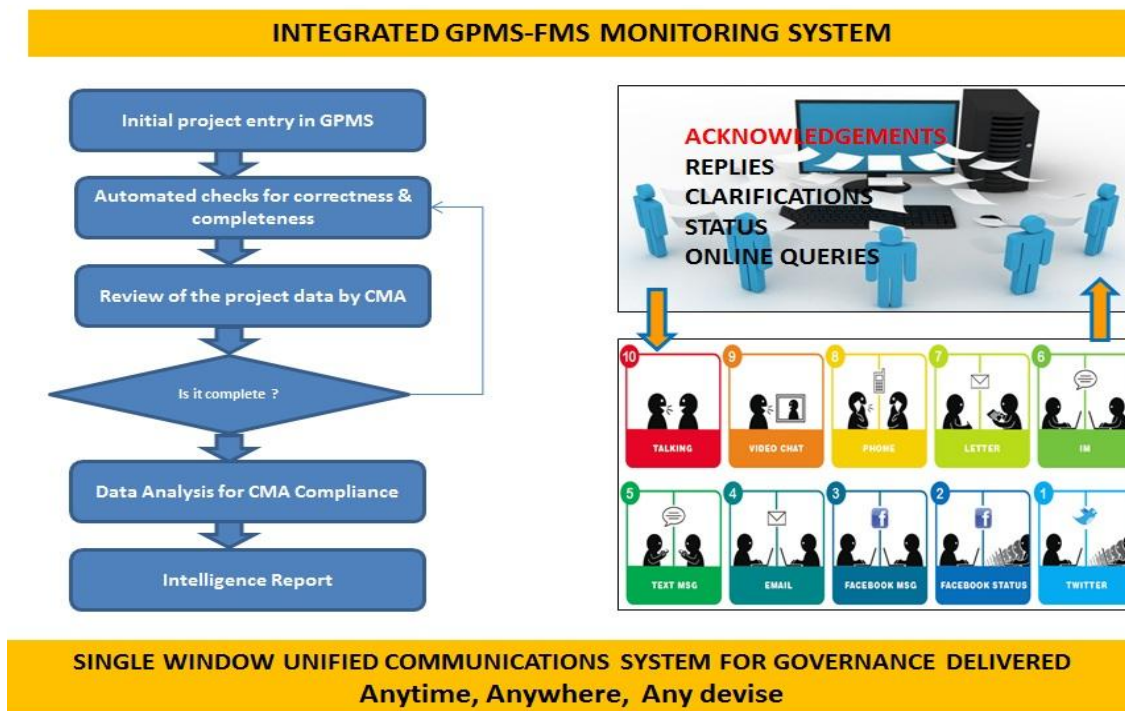

The projects data can also be uploaded into the system through excel sheets in specified format as well into GPMS, it undergoes a manual/automatic check for completeness and correctness. The CMA or related Municipality office interacts with the project staff to ensure that the uploaded data is complete in all respects. The project staff may upload additional data, scanned documents, bills etc. to ensure that all the information mandated by the CMA is uploaded into the system.

**Once the project data reaches a stage where requisite information is received the system goes for further processing. The data undergoes a rigorous stage of analysis,**

1. Cross-correlation of financial transactions with bank transactions
2. Analysis to see whether the project complies with all the CMA mandates
3. Evidence collection & correlation from external agencies involved in the project

**The below flow chart illustrates the workflow,**

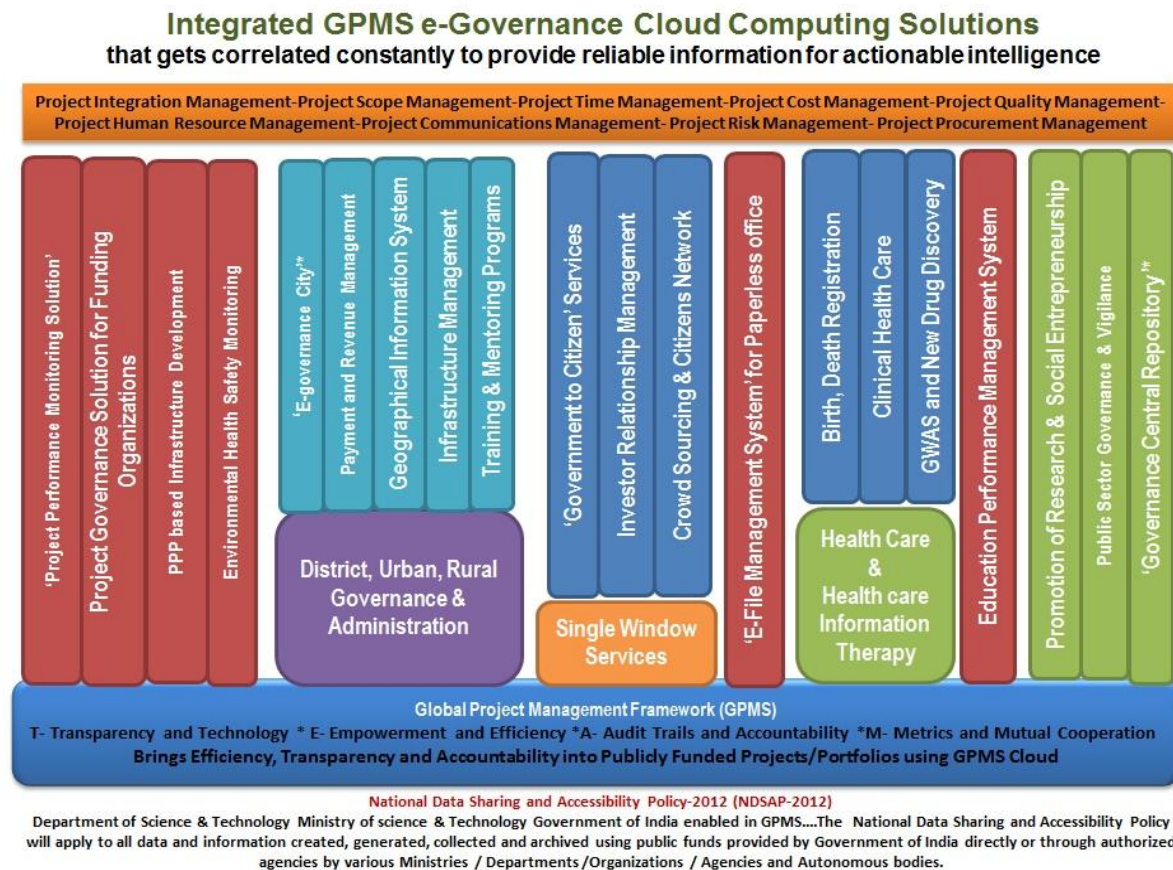

All the information about the project is kept inside the system in a closed loop to ensure security & completeness.

The CMA staff and the related municipality engineers or stake holders may employ multiple communication channels such as E-Mail, Online help, SMS, Mobile task system, etc., to ensure that all the project data is properly populated into the system.

The intelligence report created after the above steps highlights the violations of CMA or municipality guidelines, anomalies found in the tendering & work execution processes, issues with financial transactions, etc.

**The benefits of GPMS-FMS is to collect and disseminate data in a way that,**

1. Collection of data from municipality engineers, stakeholder organizations, employees and citizens in a systematic way
2. Automatic Exceptional reporting makes it easy for the decision makers to pinpoint the missing information related to the project or issues
3. Comprehensive cross indexing of information, so that all relevant information for a particular data item can be accessed online and immediately
4. Complete information is available for any issue under analysis
5. All the glaring issues such as mismatches between two data items that are expected to be the same (or different), are flagged off appropriately
6. Every piece of data has an owner, with name & phone number, so that the data can be verified again if necessary

## Some of the Integrated GPMS Unique features:

**Integrated GPMS constantly evolves and processes incoming information which in turn correlates constantly to provide reliable information for actionable intelligence**

**GPMS is Available as a Pay-by-Use Service from a Secured Cloud Computing for all Organizations**

**Indian Centre for Social Transformation**  
A PUBLIC CHARITABLE TRUST (REGD.)

**Indian CST GPMS Platform integrates various Tools & Techniques for Data Collection, Analysis and Decision Making**

**GPMS e-Document Management System**

**Citizen's GPMS on Mobile Phone**

**GPMS Integrated with Geographical Information System**

**Indian CST offers GPMS Cloud Computing Solution for the World**

**View of the Geo-location**

**GPMS Crowd sourcing management solutions**

**Integrated GPMS e-Governance Cloud Computing Solution**

**GPMS-FMS-IRMS**

**GPMS Connect - Video Conferencing solutions**

**Bringing Efficiency, Transparency and Accountability into Publicly Funded Projects/Portfolios using GPMS Cloud**

**Better information  
Increases Transparency and Accountability**

**Better delivery of services  
Better monitoring  
Improve efficiency  
Reduces cost**

Empowering 800 Million Indians-Using Technology to Bring Efficiency, Transparency and Accountability

## Expertise available related to the project available at Indian CST

Providing Technology, Project Coordination, Project Management and Monitoring relevant to the project

Providing GPMS secured cloud setup, customization and maintenance

Providing survey forms, with clear demarcation of field questions and questions to be filled up in the field

Providing completed surveys to be uploaded into GPMS

Suggesting mobile devices, Tablet PC and GPRS- enabled sim cards for each mobile and end-to-end solution for the survey system

Providing Data Center Infrastructure and Bandwidth as required for the project

Overall administration of the project online

Setting up, customizing and operating GPMS-REMS for the project

Report generation for automatic statistical analysis

Setting up & operating online help desk to provide field support

Data backup and recovery will be updated as mentioned by Client

Providing various Databases Integration into GPMS platform

Providing customized mobile survey software

Providing Backend software for mobile data processing, field database update

Providing Mobile system tech online support

Providing Data backup & recovery for mobile data and other data collected online

## Citizen's GPMS on Mobile Phone

Project Monitoring

Task Management

Progress / Status Report

Documents Upload

Survey Forms

Contacts

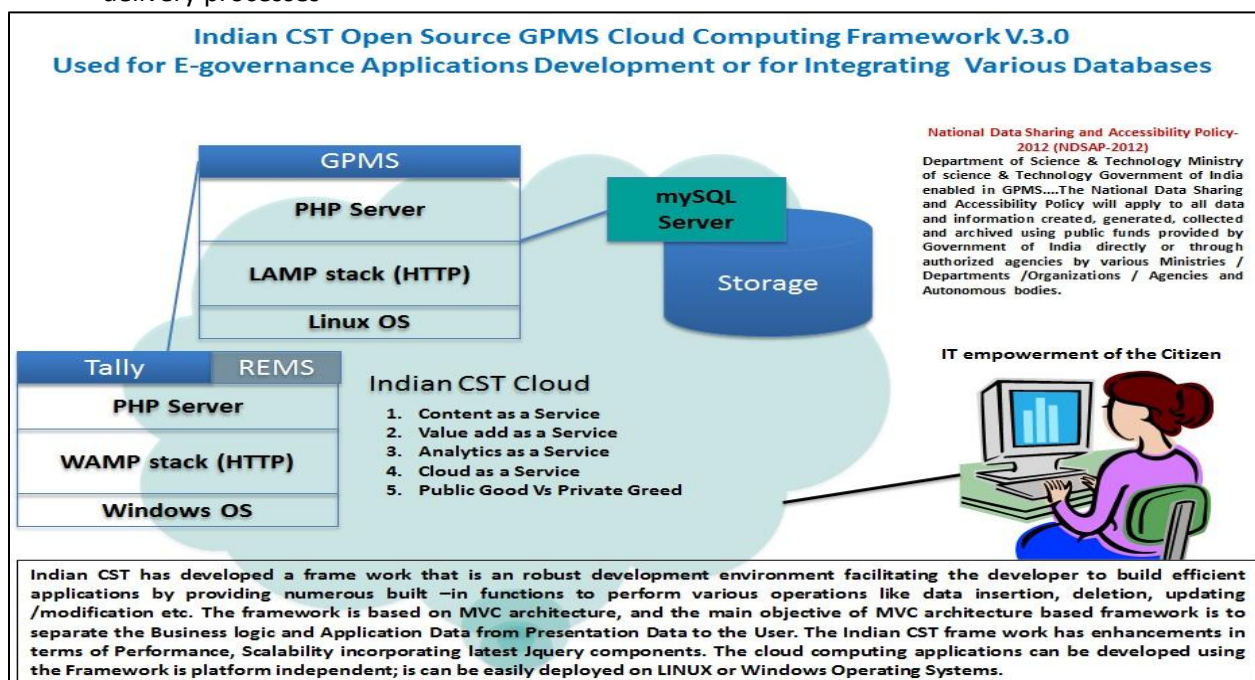

Emails

Help Desk / Complaints

SMS

1. **Indian CST GPMS-FMS Platform integrates** various Tools & Techniques for Data Collection, Analysis with Correlations for Decision Making.
2. **GPMS facilities Municipalities or enterprises** whose requirements are not covered by standard software / platforms for real time monitoring.
3. **Integrated GPMS-FMS has the capability to integrate any legacy databases** or propriety databases and provide specific or customized MIS reports as there is a critical need for developing a centralized database on various issues related to urban areas such as demographic profile, establishment and functioning of the urban local bodies, service levels and availability of infrastructure, revenue mobilisation, etc.
4. **Integrated GPMS-FMS Cloud computing platform** can be easily customized and used for Registration and Issue of Births/ Deaths Certificate, Payment of Property Tax, Utility Bills and Management of Utilities that come under the ULBs, Property Tax , Water Supply and Other Utilities, Grievances and Suggestions, Building Approvals, Procurement and Monitoring of Projects ,E-procurement, Project/ward works, Health Programs, Licenses Solid, Waste Management, Accounting System, Personnel Information System
5. **Integrated GPMS has the inbuilt capability to create forums** where different stakeholders can articulate their demands for better service delivery and governance levels.
6. **Integrated GPMS-FMS enables modern and transparent budgeting**, accounting, financial management systems, designed and can be adopted for all urban services and governance functions
7. **Integrated GPMS-FMS enables City-wide framework** for establishing planning and governance that can become operational
8. **Integrated GPMS-FMS enables all urban residents** to obtain access to a basic level of urban services
9. **Integrated GPMS-FMS enables local services and governance** conducted in a manner that is transparent and accountable to citizens
10. **Integrated GPMS-FMS e-Governance cloud computing solution or applications** can be introduced in core functions of ULBs/para-stats resulting in reduced cost and time of service delivery processes

GPMS-FMS for Citizen Complaint Monitoring / Management System for any State Government or municipality departments interface to Project / Citizen participation into the project that enables evidence capture and transmission from site that also empowers citizens to keep an eye on the project progress taking place in their neighbourhood or geographical locations enabled to capture Geo-stamped information on the specific project and pass them onto a central server in the cloud and then central processing then takes over after acknowledging and giving a complaint ID to the sender for tracking progress achieved in processing the information and the citizen can keep track of the complaints online, complainant, company, correlating, countries, communication with task management monitoring system for getting inputs for Matrix management system, document management system, for data validation, for annotation, for indexing and for moving this data information on real-time into the GPMS cloud with secured access from anywhere. This enables for organization for communicating directly with the employees for capturing specific project related Information for capturing and maintaining on a state municipality centralized repository of all stake holders records information database as its increases quality and effectiveness of communications facilitates anytime, anywhere connections for recording complaints, problem, questions or other queries for connecting inside the company, organizations, departments, or connecting with outside partners from multi-functional help desks.

Information Management with Complaint Management System is the process of managing all aspects of interaction with whistle blowers, complainant reporting of corruption by citizens, officials that CMA has with, by extending Global Project Management System to Elected Representatives, Project directors of DUDC, Commissioners, Chief Officers, Superintending Engineers, Executive Engineers, AEEs, Health Officers, Environmental Engineers, AEs, JEs, Senior Health Inspectors, Revenue Officers and Community officers, Revenue Inspectors, Accountants, Assistants, Junior Health Inspectors, Bill Collectors, Community Organisers, Water Operators and Pourakarmikas or for everyone in their respective organizations and partner ecosystems, will enable them for direct stakeholder's interactions, to monitor projects in their zones, locations or wards or and analyse complaints as it will be easy for the stakeholder to complain and stake holders should be made aware of the processes and this system available to them.

**To fulfil these goals, organizations need to follow these steps:**

1. Capture and integrate both the internal and external data into a comprehensive view that encompasses the whole organization.
2. "Mine" the integrated data for information.
3. Organize and present the information with knowledge for decision-making.

## Case Study

### Global Project Monitoring System (GPMS), Indian CST, India

**Background:** Indian CST has developed a distinctive online Project Management platform called GPMS ([www.indiancst.in](http://www.indiancst.in)) in 2009 for programme and project monitoring. Majority of the users are from public sector.

#### Features at a Glance

- ✓ Remote monitoring process for ongoing projects at multiple locations
- ✓ In-built escalation mechanism where superiors can quickly identify non-conformances and initiate interventions leading to prevention of delays and cost over runs.
- ✓ Allows graphical information exchange including videos and photographs
- ✓ Conversion of unstructured data to structured data, while maintaining their integrity
- ✓ Real time communication and information sharing
- ✓ Accessibility from anytime, anywhere, any device

#### System Outcome:

- ✓ Improve monitoring and performance management of projects
- ✓ Acts as a useful decision support system based on information from the field
- ✓ Improve transparency and accountability of projects undertaken

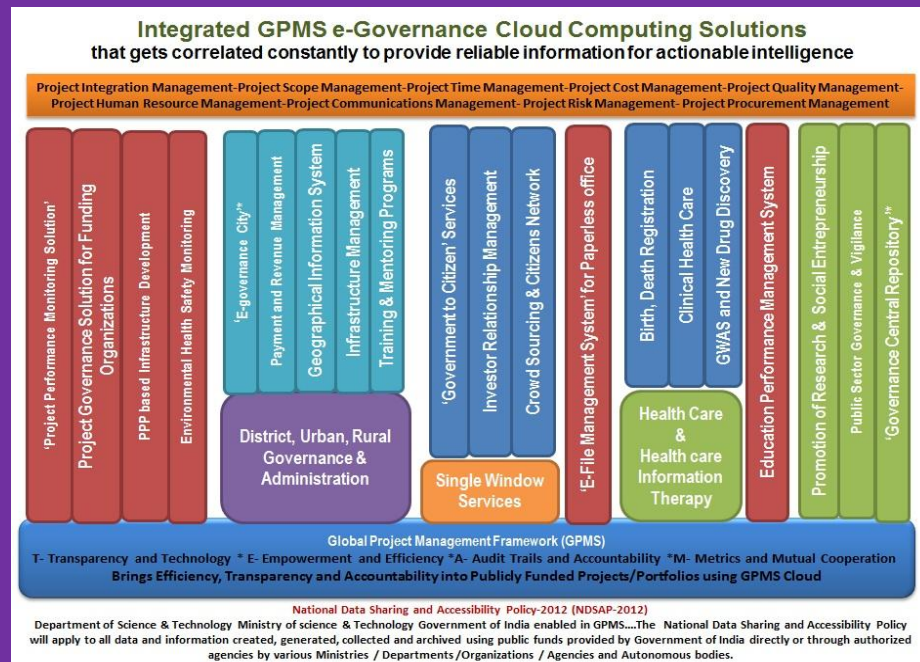

#### Strategic Development Decisions:

- ✓ Global Project Management Solution is offered as a management tool that will introduce high end technological platforms like cloud computing and crowd sourcing.

#### Impact:

- ✓ Used across a range of stakeholders including Ministries, Departments and District Municipalities
- ✓ Transparency and accountability through field data capture
- ✓ Improve the efficacy of the delivery of projects and eliminate corruption

The core strength of the GPMS is the online availability of real-time data that gets correlated constantly to provide reliable information and actionable intelligence. The GPMS-enabled remote monitoring process for ongoing projects at multiple locations leaves little scope for inefficiency or mishandling of projects and the funds associated with them, irrespective of the position in the government administrative hierarchy.

## Global Project Management/Monitoring Solution / System Functionalities

Sl. no	Problems as summarized	Requirements	Functionalities	Solution	Deliverables
	<b>Revenue Section</b>	<ul style="list-style-type: none"> <li>Assessments of Property and Vacant Land are happening separately, which can be combined.</li> <li>There is no integration between various modules and functions within the modules.</li> <li>Payment processes for each of the services is different and often faulty.</li> <li>Single point for information</li> <li>Centralized Control for data dissemination</li> <li>Easy search for data</li> <li>Seamless display, query</li> </ul>	<p><i>A Cloud Computing Integrated project monitoring system with financial management with remote eye monitoring, communications management and monitoring, public grievances monitoring with a dynamic single point dashboard representation for analyses with GIS location on map with Integrated dashboard with Role based user with Metadata management with Query System</i></p> <p><i>Unified Communication Integration.</i></p>	<p><i>Integrated Cloud Computing Global Project Monitoring System with Financial Management Solution (GPMS-FMS) For Determining geographic distribution and for correlation of payments, receipts, works, bank reconciliation online, Property Tax Assessment, Public Grievances System, Solid Waste Management, Project Management System with Integrated MIS customized dynamic reports enabled online with Source Code handed over to GOI department or State Government department</i></p> <p><i>Ability to integrate heterogeneous App Silos</i></p>	<p><i>The Integrated GPMS platform enabled with remote monitoring process integrated with task management for on-going projects at multiple locations based on flow of real-time data, quality geo-stamped information and analytics leaves little scope for inefficiency or mishandling project. And this ensures that no one in the government administrative hierarchy-including the heads of field organizations and their bosses in the administrative Ministries/Departments-can escape from their individual responsibility and accountability in cases of underperformance and / or misuse of funds in project/program implementation. The data collection will be focused on for gathering information at source as it is the necessity to integrate all information and for benefit of the departments, organizations, citizen's services etc.</i></p>
	<b>Accounts Section</b>	<ul style="list-style-type: none"> <li>Payments are delayed to Vendors and other personnel.</li> <li>Long time in budget preparation</li> <li>Single point for information</li> <li>Centralized Control for data dissemination</li> <li>Easy search for data</li> <li>Seamless display, query</li> </ul>	<p><i>Integrated dashboard</i></p> <p><i>Role based user</i></p> <p><i>Metadata management</i></p> <p><i>Query System</i></p> <p><i>Payment Gateway</i></p>	<p><i>Requirement Elicitation based decision support system for approving project and budget sanctions.</i></p> <p><i>Bidirectional payment integration with Project based milestones through Payment Gateway</i></p>	<p><i>GPMS incorporates World's best practices on how to get things done are used to process the information, as it gets validated, collated, validation of bills and photos – Proposed "Crowd Sourcing" Process analyzed and transformed to actionable intelligence. Instant availability to replicate success from others, ability to correlate information, lower cost of technology infrastructure &amp; foundation technology, capacity aggregation, integration of disparate technology &amp; resources</i></p>

	<b>Engineering Section</b>	<ul style="list-style-type: none"> <li>• Manual process</li> <li>• Delay in Service Delivery</li> <li>• Inability to track application</li> <li>• Multiple visits by citizens for availing the services leading to additional workload for both citizens and employees</li> <li>• Single point for information</li> <li>• Centralized Control for data dissemination</li> <li>• Easy search for data</li> <li>• Seamless display, query</li> </ul>	<p><b>Integrated dashboard for ( Site monitoring )</b></p> <p><b>Cataloging of project request</b></p> <p><b>Assessment and approval mechanism system.</b></p> <p><b>Role based user</b></p> <p><b>Metadata management</b></p> <p><b>Query System</b></p> <p><b>Content Management, DMS, Knowledge Management, E-Filing &amp; Sharing</b></p> <p><b>Evolution of Forms and Functions</b></p> <p><b>Templates Forms and constructs for tactical needs</b></p>	<p><b>GPMS E-File management , Digitization, content sharing, DMS.</b></p> <p><b>Pre and post implementation Audit ( Surveys , checklist, etc )</b></p> <p><b>Cataloging and requirement fact book generation</b></p> <p><b>Project prioritization decision support system</b></p> <p><b>Seamless portfolio hierarchy Parent – Child Link</b></p> <p><b>Evaluation Based Metrics System</b></p> <p><b>Online centralized Help Desk</b></p> <p><b>Security and User Management</b></p> <p><b>Dynamic and Adaptive survey capability with GPS data capturing</b></p>	<p><b>The core strength of the GPMS-FMS-REMS is the online availability of real-time data &amp; quality information in intelligent and customised formats, leading to less error-prone and speedier decision making initiatives being prompted at every level with an in built escalating mechanism. The GPMS also ensures that the superiors/supervisory officers can quickly identify the non-conformances and initiate interventions leading to appropriate preventive and corrective actions in time with all stakeholders being suitably kept informed.</b></p> <p><b>Collection, Collation, Analysis and Actionable intelligence for action and feedback for loop</b></p> <p><b>Convergence of ideas into GPMS, Cloud computing, crowd sourcing, financial accountability, actionable intelligence, data will be converted into information for action, when compliant is converted into actionable intelligence became knowledge.</b></p>

## Deliverables

**Integrated GPMS for GIS-based e-Governance Real Time Monitoring System with the following GPMS –FMS features will be integrated for any organization** that gives connectivity to data sources, record level synchronization, search of metadata across multiple sources to access or use and those who want to bring Transparency in their existing systems: Highly Replicable Model, Potential to replicate this model at various sectors with adjustment to language and structure, across other states municipalities in India and across other countries for Data Utilization and Evidence-Based Decision Making.

- i. **GPMS-Global Project Monitoring System** an end-to-end solution available for any Government organization or department use to manage their projects online to get real time information updates from all their stake holders
- ii. **GPMS- E-File management** System available for any Government department to move files online for giving approvals or rejecting and for any BPO's to digitize data online just by viewing the scanned documents online.
- iii. **GPMS-Investor Relationship** Management System available for any Govt. ministry or department use to manage investors who have proposed to invest in the country, state etc., this helps them monitor, track communications, projects, various stages of municipality project or schemes or programs or investments, MSME's Schemes and grants, etc. acts as single window clearance system
- iv. **GPMS- Online and offline Survey System** with Geo tagging available for any Government Project or feedback for conducting Implementation Impact Analysis Studies integrated with Latitude / Longitude captured automatically for technologies, schemes, products, programs surveys undertaken etc., from Hand Held/Mobile Devices Capture Data from Ground; Beneficiary Verification System (Dashboard) hosts all Data and Metrics in a Central Location for dynamic real-time display of information online for public viewing / decision making.
